

The Impact of Rideshare Apps on Bengaluru's Urban Landscape

Deepika Kannan

Why does this matter?

- **Extreme** traffic congestion
 - 6 miles takes 1 hour!
- Existing literature states:
 1. Infrastructure and policies in Bengaluru are car-centric.
 2. Buses vs. private vehicles creates social hierarchy on the road.
 3. India's "App-Based Workers Federation" is fighting for algorithmic transparency.
- **What's missing: What is the role of rideshare platforms in Bengaluru?**

I went to India!

Data

Drivers

“Without the apps, there would be no passengers.”

“There is no public bathroom. I can only take breaks in my auto.”

Passengers

“I use Uber every single day to get to work. I don’t mind paying for comfort.”

“I’ve taken the bus every day and it’s been fine. I make friends at the ladies section.”

Platform Owners

“If we don’t have dynamic pricing algorithms, the drivers will become lazy.”

“Because of the fear of bad ratings and time pressure, drivers drive recklessly.”

Results

1. Rideshare apps have made driver labor precarious.
2. Affluent residents commute daily with rideshare platforms, making traffic congestion reach an all-time high.
3. Rideshare platforms are intentionally only designed for affluent residents and undermine public transit.
